

# **MVP Critique**

## **Team :katiecaseyquiannie**

Team String Quartet

# Data Model & Key Concepts

- Data Model
  - Arrow directions should be in and out of Responses
  - The name of the arrows should be more descriptive of the relationship
    - i.e. Instructor -- (administrator/leader/teacher) -->section
  - Some of your arrows are missing the relation's type. For example, the relation between instructor and a section or between lecture and a question.

# Wireframes & State machine

- Your wireframe is aesthetically well-done, and gives a clear understanding of how the site should be designed.
- You should separate between the flow and wireframe. flow should be on a state machine diagram.
- Consider labeling the different wireframes to help the reader relate a wireframe to a specific page on your site.

# Features & Security Concerns

- Features
  - Could have more description of full set of features
    - i.e. details on who has an account, or how classes would be split up
  - Indicate more clearly what is implemented via mobile component and what is on the website
- Security Concerns
  - mention other standard rails mitigations
  - suggestion: could use MIT certificates or email confirmation to check authenticate users

# What You Did Well

- Purpose and Goals
  - Good job addressing the problem as well as its subproblems!
- Design challenges and context diagram are both very thorough. Great Job!
