

## Team String Quartet: Progress Report 11/21

### Finished Demo:

- Integrated WhereisMit ajax call to get mit building information from search
- Integrated Google maps (mostly)
  - at least know where/how to change map configurations
- Created forms and views for offerings

### Currently working on:

- Creating an offering from parsing an email
  - currently using heroku Cloudmailin add-on
  - app getting emails and currently using a simple regex to parse location from subject header

### Offering/Location Display:

- currently display all created locations on the map, regardless of whether or not there are currently offerings at the location- need to fix the location display.

### Future plans / Questions for TAs:

- integrate metrics/graphs for location/offering frequency etc
  - use Javascript API instead?
  - using a separate form for creating offerings
- remove offerings after a set period - rails gem?
- client polling of the server
- Integrate certificates/accounts
