11/14 Minutes

- Cc Critiques to our TAs
Critique from another
      Scope
            It's ok of scope for us, enough work
-Voting
      Not too difficult to implement other model, just another join table
-Rails 3 ok to use for us (because athena scripts run on rails 3)
      Forms
      ok to start at rails 3 and roll up to rails 4
-Design Documentation
      UI
            capture clicks
            search text box to create offerings
      Context diagram
            be clear on what our box mean
                  food offering => ByteMap
            direction of arrows should be consistant
            all actions done by our app should be contained in the app box
                  ie parse offering => email offering
      Data Model
            voting number depends on model we implement
            consistent naming
      Google Maps integration
            google location id
            support different namings for building (ie stata vs bldg 32)
-MVP
      reasonable
      Google maps api can
